

AutoCAD [2022-Latest]

Autodesk's AutoCAD is now installed on millions of computers worldwide, and many millions of users have created drawings and models using it. AutoCAD has also been used to design the Starship Enterprise for Star Trek (TV series), the Statue of Liberty, parts of the International Space Station (ISS), and the Apollo Space Program. The first AutoCAD user was Ted Spiker, who created a line drawing for a mailing label while in his first year of engineering school at the Georgia Institute of Technology. Today AutoCAD is one of the most popular desktop CAD programs for architects and engineers. History Autodesk (now Autodesk Inc.) was founded in 1982 by John Walker to sell engineering design software for the world's first personal computer, the Apple II. The company focused on professional software for the time, and in 1984 announced AutoCAD, a desktop CAD program with advanced graphics capabilities for use on the Apple II. AutoCAD was initially written in Smalltalk by Steve White, who later became a vice president at the company. The first version of AutoCAD was released on November 17, 1983, and after a few months of widespread publicity, brought in revenues of \$3.5 million for Autodesk. In 1984, Autodesk created a deal with the newly formed CTI Corporation, a wholly owned subsidiary of the first non-automobile AT&T (now part of AT&T). The agreement would allow CTI to develop and distribute AutoCAD, while allowing Autodesk to continue to sell its other products. By 1988, CTI had developed AutoCAD as a product for the PC platform, and in 1990, it was publicly traded on the Nasdaq exchange. Autodesk purchased the CTI subsidiary in 2006, and the following year, it was renamed Autodesk. Since its beginning, AutoCAD was compatible with and ran on any Apple II, and later on compatible PCs and non-Apple II microcomputers. The original version of AutoCAD had a very steep learning curve, as it was entirely text-based. After a few days of training, users could begin creating drawings and models. The first release of AutoCAD included three basic features: the ability to draw and edit line and two-dimensional (2D) shapes, align lines and shapes, and adjust their sizes. The second release included the ability to place 3D solids (for which the 3D dimensions

AutoCAD is licensed under one of the following four Microsoft Software Assurance licensing programs, as of 2011: Standard Academic: Licensed for students or academic customers with no commercial use Standard: Licensed for companies to sell AutoCAD as a business product Enterprise: Licensed for companies to distribute AutoCAD as a packaged software product and to sell add-ons Site License: Licensed for companies to sell AutoCAD as a packaged software product and to distribute AutoCAD as an add-on to existing products Third-party plugin architectures AutoCAD supports many third-party plugin architectures that work with AutoCAD on all operating systems, from Windows and macOS to Linux and Unix. The following example shows a plugin architecture for an AutoCAD command, which checks whether a selected block is contained in a previously defined block: { # check if block B is contained in block B1 R# B1!block B=block # list all blocks in block B1 X Block Name # select block B1 Select Block 1 # list all blocks in block B X Block Name # select block B Select Block 2 # check if block B is contained in block B1 R# B=block # list all blocks in block B1 X Block 5b5f913d15

Descentralización y de autonomía fiscal (discusión) El ponente principal, el señor Méndez de Vigo, ha presentado un informe tratando sobre la descentralización y de autonomía fiscal, que se ha debatido sobre la base del informe del señor Olle Schmidt. El ponente principal, el señor Méndez de Vigo, ha presentado un informe tratando sobre la descentralización y de autonomía fiscal, que se ha debatido sobre la base del informe del señor Olle Schmidt. La reflexión sobre la descentralización y de autonomía fiscal no ha comenzado con la actual crisis. Este concepto se remonta a la Convención del derecho de los pueblos europeos, aprobada en febrero de 1969 por los 18 miembros de la Convención, que fue ratificada por todos los estados miembros en 1984. Ese texto declara que la acción de los gobiernos “se basa en el principio de la soberanía popular”, mientras que la “soberanía sobre los pueblos y las naciones y su autonomía se otorga a éstos por medio de instituciones democráticas”. Por tanto, la descentralización y la de autonomía fiscal son clásicas de la función constitucional del Estado, por lo que en la Constitución de la Comunidad Europea se ha precisado expresamente que la Uni
