*Prescription drug overdose deaths in Nevada are four times higher than the national average, according to the latest data from the U.S. Centers for Disease Control and Prevention. The Nevada State Health Division's annual report showed the number of prescription opioid overdose deaths for the state was 4,739 in 2016, the third highest total in the nation. Earlier this year, the state

legislature passed a bill that will let Nevada join other states in allowing pharmacists to dispense drugs to anyone over age 21 who has a prescription. The Nevada Pharmacy Association has lobbied for the legislation, which passed the state Senate in April but is awaiting a House vote. An estimated 129 people died of a prescription opioid overdose in Nevada in 2016, up from 80 in 2014. The report noted that Nevada's opioid overdose death rate was 32.4 per 100,000 in 2016, or 4.3 times the national rate of 7.2 per 100,000. Nevada ranked 39th in the nation for opioid deaths, but a closer look at the data show that Nevada had the highest rate of prescription opioid overdose deaths for people between the ages of 45 and 64 — nearly seven times higher than the national average.
