Lisp is a scripting language that allows users to quickly create custom tools for the graphic interface. An AutoLISP extension can be developed using a dynamic programming language such as AutoLISP, Visual LISP, Visual Basic or Visual C# and can be added as a plug-in to the software. Extensions are usually created by application developers, or can be developed in-house. The extensions can be installed with AutoCAD, can add new functions to the software or can add new functionality to existing features. An AutoLISP extension can be developed using an integrated development environment or IDE. Some of the most popular AutoLISP editors are: AutoCAD plug-in manager AutoCAD LISP editor (Acad_lsp) LISP-IDE (Lisp IDE) Script, the Visual LISP editor (vislisp) XpressLisp (XpLISP) An extension can be developed in any programming language that can be compiled. However, Autodesk recommends the use of C++ or Visual LISP as they are less prone to error and much faster to develop than Visual Basic and most other AutoLISP editors. Visual LISP is a dialect of the LISP programming language, and allows programmers to easily modify the graphic environment of AutoCAD with their own custom scripts. Visual LISP provides a number of features that make it much easier to develop extensions for AutoCAD. LISP is a dynamic programming language and therefore allows users to write scripts in a very short time. Visual LISP is the most common extension development environment and is used to create the majority of AutoCAD extensions. There are a number of advantages of Visual LISP compared to other programming languages. These include: LISP is a fully integrated a1d647c40b
