## What's New In AutoCAD?

“AutoCAD” represents the merger of AutoCAD and AutoCAD LT. Autodesk confirms that AutoCAD 2023 will be the last version of AutoCAD to be released. In AutoCAD’s history, you can trace a continuous timeline of graphics production. Early drawings used pencil and paper, then pen and paper, then ink and paper, and later, color and inkjet-based ink. Then laser engravers, paintjet printers, plotters, then the “intelligent” inkjet. Then came Photoshop, and then the rendering engine in Maxon’s Cinema4D and UE4. After that, vector illustration software like Adobe Illustrator and Inkscape. The electronic design layout technology known as rapid-prototyping (RP) came next, then the rendering engine within 3DS Max. More recently, rendering engines within Softimage, Lightwave, Maya and Modo have given way to the Autodesk Engine. Autodesk now offers AutoCAD throughout a singular timeline, beginning with early computer-based drafting in 1982, and culminating in the eventual release of AutoCAD 2023. In the 30-plus years since AutoCAD launched, AutoCAD has had a large impact on how we do things. It has encouraged us to be more mindful of color, scale and accuracy. AutoCAD is also an example of software that has grown and matured with each successive version. While AutoCAD 2023 is a mature design, the opportunities for growth and creativity remain endless. To take advantage of AutoCAD 2023’s new functionality, first, you’ll need a license. Then, create your own drawing, which could include multiple viewports for different perspectives, or multiple overlapping parts for assemblies. Next, you’ll want to install the latest AutoCAD Updates in AutoCAD 2023. In AutoCAD LT, AutoCAD 2023 has enhanced the Markup Import and Markup Assist features, which are available through the Markup menu. (Note: Markup is AutoCAD’s name for text/graphic annotations.) AutoCAD LT’s Markup feature enables users to import and incorporate feedback from notes, marked-up drawings, drawings, and PDFs. You can easily view and annotate a sheet of paper, then get that feedback into your
