The app is used primarily to draw geometric shapes on two-dimensional (2D) paper drawings. Some users have used AutoCAD to create CAD models and mechanical drawings. AutoCAD is used to make more than 1.5 million 2D drawings every year. More than 500,000 developers use AutoCAD to create their own 3D models. With more than 6 million copies of AutoCAD installed, the app's yearly revenues are over \$1 billion. In January 2010, Autodesk released AutoCAD 2012, which has a new drawing interface, version number 2012, and other features. On November 14, 2011, Autodesk launched AutoCAD LT, a free app for students and hobbyists. In April 2014, Autodesk discontinued the AutoCAD LT license. The AutoCAD Manual covers the entire app. The app is available in 31 languages. As of December 2011, Autodesk had shipped more than 5 million copies of AutoCAD. History Early versions AutoCAD evolved from an earlier application called AutoLISP. Its first release (Version 1.0) was in December 1982. Development was led by Bill Roberson. Initially, only technical functions, such as graphic output, were built in. One of the first applications to use AutoLISP was the synthesizer software Synesti, which Roberson developed for a synthesizer company. One of the first users of AutoCAD was Walt Filice, the chief design engineer for the Vickers Armstrong, an English heavy engineering and defense contractor. Version 2.0 was released in November 1983. It contained a main menu and a workbench, and the AutoCAD user interface (UI) had elements of the NeXTSTEP operating system (OS). Version 2.5 was the first release with a completed UI. A later version, 2.5x, incorporated the Morpholio product, the first 3D modeling application available for the desktop. Version 2.5x also introduced multiple user interfaces (MUI), which enabled one user to work on a document while another user is modifying it. In October 1987, Autodesk introduced an optional license for AutoCAD for commercial use, which required users to pay a yearly fee to Autodesk. Release 3.0 of Auto

According to Trendforce "as of 2014, CAD applications are estimated to account for over 27% of the total design software market, with market share of CAD applications in architecture and civil engineering design growing at a rate of around 5 percent per year. By 2016, CAD software is estimated to be the second largest software market, after the operating system market." Graphics software AutoCAD 2000/2003 (2000/2003) is a DOS-based 2D CAD application suite, developed by Autodesk in the late 1980s. Its graphics are created using polygons, lines, circles and text. Although the interface and basic functionality is similar to that of AutoCAD LT, the original Autocad 2000/2003 was not available on Linux or Mac OS X. Visual LISP Visual LISP is an add-on for AutoCAD that is designed to provide visualization and plotting capabilities, graphic conversion, and added spreadsheet automation for AutoCAD users. AutoLISP AutoLISP is a Visual LISP add-on for AutoCAD. AutoLISP allows scripts to be used in AutoCAD; however, AutoLISP scripts are not normally compiled and executed like an AutoCAD program. An AutoLISP program is written in a single text file that is loaded into AutoCAD to create interactive Visual LISP. It has a much larger user base, since it can be used from any computer that has AutoCAD installed. Most CAD vendors offer their own version of AutoLISP. AutoCAD has been integrated with several other software programs. Often, AutoCAD has been developed with the goal of integrating data from other programs. For example, if the plotter was a plotter, AutoCAD could be integrated with other software using AutoCAD's network capabilities. As long as the data can be plotted, the AutoCAD program is not limited to plotting the data; it can create shapes from the data. This allows AutoCAD to become an additional tool in other software programs. Other software programs use AutoCAD to develop their own capabilities, for example, Excel and Microsoft Works use AutoCAD as the basis for their spreadsheets, since AutoCAD allows users to develop graphs and charts. The B.C. Centre for Excellence in Drug Use Research says while the province did not monitor people's consumption habits, it did record the percentage of purchases made at the new government-run Liquor Distribution Branch and what they were purchased for. "We found that people are still drinking at similar rates, they're just buying more of it," said lead researcher Dr. Andrew Potter, based at the University of Victoria. The Liberal government had hoped restricting access to alcohol would slow consumption, but the data suggests that hasn't happened. "It's very early days, but I'm not seeing evidence that it's made a big difference," Potter said. Potter
