There are other programs designed for editing raster images, such as the free Microsoft Paint and Paint.NET. (We cover these programs in Chapter 15.) But Photoshop is the industry standard, and it does more than just paint. It also has a number of editing tools built-in, and it's really good at nonpainting tasks, including much more. If you create a lot of graphics, and sometimes even if you do, you need to resize images. There's just no substitute for using Photoshop's built-in Image Size command. The following steps assume that you already have an image open in Photoshop: 1. **Choose Edit** ⇒ **Image Size from the main menu**. The Image Size dialog box opens. 2. **Enter a new size value in the Width and/or Height box, as shown in Figure7-7**. The dialog box displays your choice. You can choose any size, but if you're creating a JPG, keep the Width to around 300 pixels and the Height to between 200 and 400 pixels. **Figure 7-7:** The Image Size dialog box. 3. **Click the OK button to close the dialog box.** Your new image size is saved. You may need to click the image to see the changes in real time. Photoshop has many other editing functions, but if you're looking for a one-stop shop for creating and editing images, the Image Size dialog box is the command to use. ## Taking Control of Pictures Photoshop can certainly be used as a camera replacement. You can open, import, and fix photos, but it offers an even wider range of capabilities than that. You can also use several of the basic editing tools in Photoshop to create your own photos. If you're looking for a feature list for a particular version of Photoshop, you can find it in the official Photoshop help. To access the help, choose Help⇒Contents.

1. Field of the Invention The present invention relates to the milling of hard materials and more particularly to milling equipment with a cutting head, which is adjustable in the radial and axial direction, which is provided with a replaceable or serviceable milling cutter. 2. Description of the Prior Art In prior art milling equipment with replaceable milling tools as well as in the majority of milling equipment sold commercially, the milling cutter is provided on a carrier, which is mounted on a rotatable or non-rotatable milling spindle. In order to ensure the proper positioning of the milling cutter on the spindle, on the one hand, and to provide for the proper protection of the milling cutter, on the other hand, a particular method is used. For positioning of the milling cutter, the carrier of the milling cutter is provided with an angular dimension which must be adjusted to the desired angular position of the milling cutter. Protection of the milling cutter is achieved by the insertion of an impact protection of a hard material in a housing (reinforcement). The rotatability of the milling spindle is provided in that the spindle itself is rotated while in a certain angular position the milling cutter is inserted and is rotated by the milling spindle. A milling cutter, which is provided with a milling cutter (tooth), which is arranged such that it can be replaced, has been proposed previously. One example of the arrangement of the milling cutter in which the milling cutter (tooth) can be replaced is given in DE 2933267 A1. This DE patent consists essentially of a milling cutter which is mounted on a milling spindle, which is firmly and rotatably held in a spindle housing. Also provided is a housing in which the milling spindle is securely held and which projects radially through this housing and bears the milling cutter such that it projects at its end remote from the spindle housing. The milling cutter is formed by a milling body which is exposed to a cutting impact and is supported and locked in this radial position on the end of the milling spindle. The milling cutter consists of a cutting material, which is made of cemented carbide and which has a micro hardness of at least 2,000 HV, in this embodiment up to 63 HV. This prior art DE patent has the following configuration, as a result of which the milling cutter is immov
