International Standards 9-1097-9182. Association for Standards. Download 9182.pdf. The roping system consists of three wings of six-inch tree trunks, each with a truss of five bull ropes. It is set up on both sides of the stream. The two who go first are followed by some twenty others. Then, just before they step on the projecting logs, the men draw the trusses of bull ropes up to the logs; and, having got up on to the truss, the men grasp the bull ropes and each, on seeing the other in the same way, makes a step at the same time, and, the bull ropes holding, the other keeps pace, and the two sets of bull ropes revolve around and describe a circle, so that the whole line forms an unbroken circle. The procedure is very similar on the second day, the difference being that after the second crossing of the stream, the second man and his bull ropes get up on to the branch and step off at the same moment as those on the first crossing. On the third day, if the numbers are large enough, they commence at the same side of the stream as on the first day and step off at the same instant. All this is done at a walking pace for about a mile, when the whole line will stop and have a drink. In this way they manage to cross the stream once or even twice every day. Thus a line of four men can cross every day, and the number can be increased if the
