Norton AntiVirus is one of the most common forms of spyware that gets integrated into many home computers, often without the user's knowledge. Thankfully, Norton AntiVirus is user friendly and can often be found for free or very low prices. However, this doesn't mean it's perfect as it can still be a big threat to your PC, especially if used as your main security application. In the category of tools created to improve your Internet connection speed, there is also Quick Boost. Using this lightweight and comprehensive tool, you are able to boost the Internet speed from your Dial-up or Cable/DSL connection. The utility is capable of doing so by allowing you to change specific registry settings without actually touching them. With it you can set the value for MTU (maximum transmission unit), which controls the maximum packet size that can be sent. This change can be applied to both Dial-up and Cable/DSL connections and has different values. Normally, a larger packet is more efficient since it carries more data and fewer packets are processed. From this point of view, the application proves very helpful because it allows you to set the MTU at the maximum capacity. Though it sounds good, this can backfire, creating lag due to the fact that a bigger delay is created for the packets that follow. Besides the MTU, Quick Boost also enables you to set the TTL (Time to Live) or hop limit that determines the lifespan of any data packet that enters your system. Quick Boost displays a user-friendly interface that makes it easy to operate. To make the changes you need in order to enhance your Internet connection speed, all you have to do is simply click on the options you want to activate then click the "Boost" button. The changes you apply aren't

Roses are red, my friends, and Valentine's Day is upon us! While most stores are full of roses, everyone knows that the two most common flowers associated with this day are red roses and roses that come in hearts. And while you could always purchase either of those, there's another way to celebrate love: the kind that goes through social media. Yes, today the Chinese students celebrate a special kind of love by sending giant red rose-inspired cards to their loved ones. This phenomenon, which goes by the nickname of "Red Pig's Chinese Valentine Day" or "Red Pig Day", is celebrated on the last day of February each year. And if you are wondering what on earth could make Chinese students choose to send a red rose-inspired card to their loved ones on this day instead of exchanging flowers and getting gifts in the form of gifts, there are some theories out there. For one thing, the red color symbolizes happiness and love. Also, roses are the most popular type of floral in China and is also their national flower. And finally, red roses symbolize the fact that the Chinese people are blood-related and thus symbolize the fact that they are a nation of the same blood. So if you're looking for a creative way to express your love for your Chinese friends and family, you might want to consider sending them the kind of gifts you can see in the picture above. If you do so, you will be supporting a great cause, and also you will be ensuring that China gets much-needed cash to assist their needy citizens. Just make sure that you don't send a rose-themed gift that would be viewed by people as offensive or silly.
