This is a great start to create your own material assets, but you may not want to start with a blank piece of paper, ready to spend hours with Photoshop. This chapter outlines the basic SketchUp modeling workflow, which enables you to create your own 3D content and then take advantage of the many online resources to enrich the same content, making it

accessible to you anytime, anywhere. ## SketchUp Workflow Overview The SketchUp modeling workflow outlined in this book requires you to create a base model by using 3D content such as 3D building models, which are typically not the focus of most designers, and photos and videos of the design. After creating a base model, you can use the Scene Properties dialog box to import photos and videos, along with any textures and colors in the Photoshop document. Next, you can create a 2D image that uses the content from the modeling process or from other sources. You can edit this 2D image in Photoshop and, finally, export it to SketchUp, where you can improve or further refine the image before exporting to the final format such as 3D Studio. The key stages of the modeling workflow are * Designing the model * Saving the model * Uploading to SketchUp * Editing in Photoshop The following sections take you through these steps in depth.
