Using thin section and high voltage electron microscopy (TS-HVEM) we have found similar structural changes in human and buffalo RBCs under the effect of NaN₃. The morphology of oxidized and reduced RBCs indicates that the main electropositive parts of the RBC membrane are no longer joined. The result is a gap for Ca²⁺ into the cell. The most expressed alterations concern the cytoplasmic membrane, particularly the fluidity and the arrangement of the lipids molecules. The movement of the lipids during the swelling process followed by the impulse of osmotic pressure, is facilitated by the Hb system, as well as the gain of Na⁺ ions. Such alterations create a possibility for the "membrane" permeability for cations. Goh, Michiyuki Fujita, Phys. Rev. Lett. **95**, 100504 (2005). Y. Nishida, Phys. Rev. A **74**, 062321 (2006). R. Jozsa, D. S. Abrams, J. P. Dowling, and C. P. Williams, Phys. Rev. Lett. **85**, 2010 (2000). R. Jozsa, J. Mod. Opt. **41**, 2315 (1994). F. A. Tay, A. R. Plastino, A. Plastino, M. C. Rocca, Phys. СОБИРАЕТСЯ ДО ПОДДАНИЯ "ПЕРЕВОДЕР" This is a new format, and a step towards completely anonymous internet communication. Anonymous Internet Communication. With no internet protocol (IP), there is no address, no geo-location, and no other identifying information about the user. This video is encoded in 4K UHD at 25 Mbps. Hyperlum. It is a new full length trailer for the upcoming science fiction thriller directed by 'Ben Foster. The film tells the story of a man who uncovers a secret about himself and his father as he opens a door to a forgotten past in the future. Film is currently in post production. Chris can't stay away from his wife, Megan, long enough to tell her about his discovery, leading to a chain of events in which the future he uncovered becomes reality. Lumidia Version 2 is out for the iPhone and iPad. The new iPad features our all new Lumidia display. It's a great looking display, but we can't live without the iPhone version. Lumidia currently sells 2 types of iPhone displays. We have the Liquid LED version and the all new LED-ON. The Liquid LED is a response

to the bottom-up approach of the iPhone 4/4S. Light, as opposed to pixels, flashes by at an incredible 5.7 Hz or 300 times per second on the iPhone 5. A liquid LED display screen is built in layers. A metal layer is etched to support LCD electronics. A protective glass layer is deposited over the metal layer. The surface of the glass is polymerized, and the LCD layers are adhered. One small problem. The liquid LED's lower layer, the LCD, has a tendency to shrink under the harsh conditions of display manufacturing. This is the reason the display is flexible. We take the LCD layer and stretch it to hold the entire display. Using this process, we created a glass screen for the iPhone, the same size, weight, and color. Lumidia's LED-ON is a response to the iPhone 5s. For the iPhone 5s, the screen is stretched a little, but using the same process, we created a much larger screen. This is the type of display you will find
