AutoCAD Crack Keygen Xref AutoCAD Crack Keygen Xref is a CAD application which was added in AutoCAD Cracked 2022 Latest Version 2002. It has many functions in common with AutoCAD, but it also has similar functions with PC-based CAD software such as AutoCAD LT. In addition, AutoCAD Xref is an add-on application to allow users to convert drawing files between various CAD formats and design for both AutoCAD and AutoCAD LT. The user interface and functionality of AutoCAD Xref has been improved over its predecessor, AutoCAD 2000 Xref. Xref uses the same data format as AutoCAD LT. Xref was rebranded AutoCAD Xref LT in the 2010 release of AutoCAD LT and in 2011 was renamed again as AutoCAD X. Tagging AutoCAD supports tagging for application-specific drawing data. Tag information includes a unique tag, a name, and a description. Tags can be added to specific data objects, parts, entities, or drawings. They can be created and edited by the user, or they can be automatically created and assigned. Any tag can be used by other AutoCAD applications. Application management The Model space, the drawing list space, and the Property Manager are the major components of an AutoCAD environment. Model space The Model space is a workspace where all the drawing information is stored. The Model space automatically creates a new drawing in the workspace when it is opened. The Model space is a workspace where all the drawing information is stored. The Model space automatically creates a new drawing in the workspace when it is opened. The workspace can be saved with a new name and is closed when the user exits the application. The Model space can be opened from within the application and can also be created from the command line. The user can assign any custom name to the workspace. The Model space can also be used to create additional workspaces. Drawing list space The Drawing list space is a workspace where drawing information is created. This workspace can be used to open drawings and modify the drawing information. The drawing list space contains a list of all drawings that have been created. Property Manager The Property Manager allows properties to be set for data objects. It is the central location for setting properties and modifying data. It can be accessed from any drawing or model space. The Property Manager can also be accessed from the command line.
