What's New in the Active MP4 Video Splitter?

Tiva Flash Encoder is an application that is able to split MP4 files into several segments, as well as convert the files to other formats, including: MP4, FLV, AVI, MOV, WEBM, OGG and others. It also has the ability to reverse the effect of splitting video, so you can join several

files into one. However, the program supports media conversion only in Windows. You can find more about the basic settings and options in a help file. The interface is fairly simple to use, since it offers 2 main ways of handling the conversion: either through a simple file import mode, in which the program will browse the selected MP4 files and split them automatically, or through a drag and drop method, in which you can simply drop the files from a file manager to a specific folder. The application isn't limited to split video and it can also convert MP4 files to other formats. Moreover, it can play all types of video and audio files. Plus, you can easily look into the program's help file or work with the settings panel. One limitation of the program is its speed, which during our tests wasn't able to split a file in less than 20 seconds, but it can reverse the effect of splitting the files. We also noticed a hang or system freeze during conversion, especially when dealing with large files. Tiva Flash Encoder is a fairly easy to use tool. However, the program is optimized for Windows and seems to be a bit slow. We recommend it to all users.
