The following are some tips to increase AutoCAD productivity: • Practice drawing a simple sketch to gain experience in AutoCAD before moving on to more complex drawings. • Check your paper drawing against the blueprint or other source material to avoid creating a 'dead drawing'. • Don't use screen view or move the cursor over the paper until you're ready to make your changes. • Learn how to cut out a section from a paper drawing. • Make sure your fonts are large enough to distinguish printable details. • Learn to use mouse commands and AutoCAD drawing conventions to work faster. • Be aware of how AutoCAD works. Know the differences between objects. • Use the undo feature. Learn to roll back your changes. • Automate repetitive drawing procedures. • Use layer functions to edit, manipulate, and combine multiple drawings. • Learn to use a set of standard AutoCAD commands. • Read the manual and familiarize yourself with the AutoCAD system. • Set up the paper-to-display area ratio, which is the horizontal and vertical size of a paper drawing that appears on a display screen. • Use AutoCAD to design and place objects on a three-dimensional (3D) model. • Learn AutoCAD's measurement and dimensioning systems and the special symbols for those systems. • Learn to create custom symbols to represent special sizes, edges, materials, and so on. • Remember that you can always customize the way you work in AutoCAD. • Use the contextual menu and features available in the AutoCAD ribbon to increase your efficiency. • Find the right work space for your drawing. • Use a standard paper size, such as A3, B4, or A4, and use paper that's not too thick. • If you need to scale a drawing, do it as early as possible. • Use printed photographs and drawings as the basis for your design work. • Use AutoCAD's AutoSnap, AutoCorrect, and AutoLayout features to draw accurately and quickly. • Learn to use many of the configuration dialog boxes in the Add-ons Manager. • Don't rely on AutoCAD's workspace organization. • Be prepared to move objects around on the canvas for different views and to place objects into groups
