To examine the validity of a FFO designed to provide a nutritional assessment of a non-English speaking population living in Melbourne, Australia. The food intake of 31 participants was investigated at fortnightly intervals over two months using a 7-day food diary. Average nutrient intakes from the two month period were compared to intakes obtained from the 14-day FFO. The FFO was revalidated for vitamin E and fatty acids for six groups of participants: four groups of women of varying weight and smoking status, two non-smokers and a smoker and two groups of children 6-10 years of age and 11-14 years of age. For vitamin E, energy-adjusted Spearman's correlation coefficient between FFO and diary over the 14 day period was 0.56 (P
