===== (1) Put DCE on your playlist and let it run until you are done, or quit. It will process the first image and store the settings and images until you exit. (2) From now on, you don't need to do anything else, just play your music, surf the web, or whatever. DCE runs in the background and will process your next images. (3) After the last image is processed, you can close your iTunes window and DCE will keep running on the next images. (4) After the process is finished, close DCE. Digital Camera Enhancer software application is designed to do the hard job of noise reducing, skin smoothing and automatic balance control for you. * The program works best if you have bad light condition (indoor, shadows etc..) and your image is somehow

off. So if some of your images are already fine, you won't see much difference. DCE makes very delicate changes. * One thing makes DCEnhancer different from other tools - reducing the noise and skin smoothing algorithm. It makes DCE ideal for making cool portraits and close-ups! First you have to find out the optimal settings for your camera. * There are just few sliders you will be changing more often: * Midtones - if your image is too dark or too bright * De-Noiser - to reduce noise and skin artifacts from the objects on the image. * Note: This software is intended for advanced users. Most of the sliders work in the default position. (As on the screen capture). You should gently change one of the sliders just little and then see the effects. Once you find your optimal settings,

it should work on most of your images from the same camera. And you will always find images where it doesn't work. * Digital Camera Enhancer Description: =====
