What's new:

by's has announced its important May 1st reselling of The Papers of Henry Kissinger, one of the most important works of diplomatic history of the 20th Century. This sale will not only prove invaluable to scholars and researchers but will also give this important conversation with other voices from the National Security Affairs community. In addition, Eric Schmidt, CEO of Google, will be auctioning a signed copy of his own version of Kissinger's diaries. It is important to note that some of the diaries, including one from 1969 which has been published by Simon & Schuster (with a different and broader perspective) were meant for internal use at the White House, not for the public at large. These diaries are not for sale until October 2014. The Reselling of this volume has been of deep concern to me for some time. One need only read the Word on the Web to realize what enthusiasts for the ongoing dismantlement of the American experiment in limited government have clearly stated: "This book is obsolete." "Henry Kissinger, the antithesis to most principles of the founding fathers was a man driven by a malevolent, activist - and now very public - goal of total control and world domination of all that matters. The sophisticated men of the shadows were shadows...while Kissinger, with his astoundingly pro-Soviet views and practices, willingly became its emissary." Since this volume was first published in 1977, scholarly work has multiplied

exponentially about the profession Kissinger epitomized - geopolitical power politics and the academic world can no longer forgo a candid conversation that remains long overdue. The rare collection of eight major private papers includes notes, memos, and personal appointments diaries, memos, and recording of private conversations with Henry Kissinger dating from 1945-1975 including many diaries that are never found or published by historians generally, and those published by Simon & Schuster do not contain it all. Key unpublished items include: A.I. "Sonny" Wandelsdorf tape - containing candid conversation between a young Kissinger and Nixon President; INCIDENTS, memos and notes by Kissinger from his days as a Staff Assistant in the Office of Naval Intelligence in 1947; a separate collection of Kissinger's papers from 1962 to the present day, including long-lost items such as handwritten notes to President Richard Nixon on De Palma and other famous films, a letter revealing Kissinger misspelled the name of his beloved wife, Vietnamese interpreter, and a draft of the Foreign Relations mission statement
