The EPR transition of o-nitrosophenol to the phenoxyl radical. The inversion of the C-O bond in o-nitrosophenol to C=O was investigated with the electron paramagnetic resonance (EPR) technique. Time-dependent EPR spectra of this compound were measured under the condition of rapid mixing, and results showed the EPR transition of o-nitrosophenol to the phenoxyl radical, NPS-1. These spectra provide useful information about chemical reactivities of the phenoxyl radicals. Thus, this work provides direct evidence for the existence of the phenoxyl radical.
