Adobe Photoshop CS6 is a powerhouse software product that can perform advanced image manipulation. This software is highly advanced, has a ton of features, and is expensive. In this review, we will discuss the features of this software and the best ways to use it. 1. Programs That Can Easily Edit Your Photos If you do not know how to edit your photos in Photoshop, try Pixlr. This program is probably the simplest way to edit your photos, even if you are new to editing. With Photoshop, you have options that you don't with Pixlr. If you like simplicity, then this is the program for you. 2. An Image Editing Software That Has Color Schemes If you are interested in editing your photos, but would prefer a program that is geared towards editing colored images, you might want to consider using ACDSee's color sliders. While you are able to apply color sliders to your photos, you will also get all the other features of a photo editing program, like adjusting brightness, sharpening, and much more. 3. A Photo Editing Software With Great Filters Sigma Photo Pro 12 has a ton of filters that will enhance your photos. Use these filters to help you apply more effects to your photos to enhance them. The good thing about filters is that they are one of the most consistent ways that you can tweak images to produce interesting effects. 4. A Photo Editing Software with Lightroom Lightroom is a photo management and editing program that is included with Photoshop. While Photoshop alone is very powerful, Lightroom integrates with Photoshop and allows you to edit and organize your photos with ease. 5. A Photo Editing Software for All Types of Photographers With Sony's free PhotoFlow, you can adjust your photos without any of the barriers that are normally associated with photo editing software. You can open, view, save, edit, and share photos just by dragging them right into the PhotoFlow system. Adobe Photoshop Adobe Photoshop has long been the leader in the photo editing software market. With Photoshop, you can design, retouch, or just do an overall makeover on your photos. Use the layers in Photoshop to separate pieces of the photo. This enables you to take a black and white photo and apply filters that can make the photo look like a color photo. Top Free Photo Editing Software Top Free Photo Editing Software

Q: R: tapply function results in correlation matrix not matching original matrix I want to correlate a large dataframe with itself (row on row). However, my results are not matching the exact same correlation matrix as when I calculate it individually. The correlation matrices for two columns of one of the dataframes are shown below: Original correlation matrix col1 col2 row1 1.00000 row2 0.95432 1.00000 row3 -0.56511 0.95432 row4 -0.56506 -0.56511 row5 -0.56504 -0.56511 Correlation matrix after applying tapply function col1 row1 1.00000 row2 0.95432 row3 -0.56511 row4 NA row5 NA Correlation matrix after calculating correlation matrix individually col1 row1 1.00000 row2 0.95432 row3 -0.56511 row4 0.98789 row5 0.98789 Am I doing something wrong? Please let me know if you need more info. Thanks. A: I can't tell you why it happens, but tapply returns a matrix and that seems to be what you don't like. We can still extract the correlation matrix using sapply: R> sapply(as.matrix(df), cor, use="pairwise.complete.obs", na.rm = TRUE) col1 col2 row1 1.00 NA row2 0.95 NA row3 -0.56 NA row4 NA 0.98 row5 NA 0.98 Why tapply returns a matrix? It seems the tapply is coercing the correlations to a matrix. If
