Thompson. It was known as the Greater New York Symphony Orchestra and had a number of different personnel changes over the years. It was most successful from 1930 to 1935 as a recording orchestra. Their most famous recording was "Swanee" by Stephen Foster. The orchestra was established as a separate entity from the New York Symphony Orchestra, but Gibbs and Thompson initially played in the orchestra. In 1930, the orchestra formed the Warner Brothers revue at the Empire Theater in New York. Guy Gibbs died in 1938 and his share of the profits from the studio cast recording of 'Swanee' were given to his estate. Thompson directed the music for the revue. Gibbs and Thompson were inducted into the Musicians Club of New York in 1958, and Joseph A. Thompson died in 1966. In 2015, the Gibbs-Thompson Orchestra was featured in the summer season at the Walt Disney Concert Hall in Los Angeles. Prostate cancer (PCa) is the most common malignant disease of the male reproductive tract and the second most common cause of cancer-related deaths in men worldwide. Recent advances in genomic technologies are enabling better characterization of the genomic complexity and heterogeneity of PCa. As the fraction of the human genome dedicated to the regulation of transcription has been estimated to be only 1%, transcriptome-wide characterization of expression of long non-coding RNAs (lncRNAs) is likely to provide invaluable insights into the pathobiology of PCa. However, our understanding of the functions of lncRNAs in the prostate is limited, but evidence suggests that lncRNAs play essential roles in human physiology and pathology. In this review, we discuss (i) the genomic and molecular characterization of lncRNAs in the prostate; (ii) the roles of lncRNAs in prostate cancer and their potential utility as diagnostic and prognostic biomarkers and therapeutic targets for PCa; and (iii) the opportunities provided by the development of improved genomic technologies and computational methods for identification of lncRNAs that are differentially expressed in PCa to accelerate clinical applications of lncRNAs in PCa.Treatment with prolactin of rat mammary tumor transplants is different from that of spontaneous mammary tumors. Immunonephelometry was used to measure the concentration of prolactin in the milk of mothers with early and late occurring mammary tumors. Treatment with prolactin increased the concentration of prolactin in the milk of mammary tumors in situ in rats with early and late occurring tumors. This was not so for mammary tumors that developed after priming with a carcinogen and transplantation. Thus, treatment with prolactin promotes mammary tumor growth in rats with early and late occurring tumors.WEBVTT VALLEY >> GOOD MORNING, EVERYONE, AND YOU
