Introduction To Robotics Saeed B Niku PdfrarThere have been rumors of a new Roku device, and at the moment, we

know the hardware will have a quad-core processor, and may have an 8-inch screen. In addition to that, the device will run the company's new operating system, Roku OS 7, which is designed to take advantage of the company's burgeoning DVR lineup and existing set-top boxes. We now know there will be at least three new Roku models, and they could even be the first new hardware models to see light. The new models will be the Roku 3, Roku HD, and Roku Ultra. The third model, the Roku Ultra, will be the most powerful device that Roku has ever offered. This will be able to play all of the video formats that Roku can play, and it will sport a 4K screen. The other two new models will have 1080p resolution screens, and we have yet to learn if either will have Dolby sound. The Roku Ultra will be priced at \$99, and the two other new models will be priced at \$79. All of the new Roku hardware will include an HDMI port, and Wi-Fi access. The new firmware is just the beginning for Roku, however. The company also has plans for the software, including the Web browser and media center. Roku OS 7 will be available to all of the new hardware models starting on December 14, and the new software will be available at that time as well. The new features of the OS 7 include: Customizable home screens Multitasking Batch media management Downloading movies Voice activation Cloud media Suggestions for movies Sorting New playback controls There are still many other features that we do not know about yet. Roku is holding a media event on December 11, and more details about the new Roku hardware and software will be available then
