The Goal: You can choose from 2 Difficulty levels, Easy and Hard, so you can play the game the way you like it. Easy mode starts out easier, with a 20 second countdown before the robot explodes, and can be played again and again to get better and better. Hard mode starts out harder, with a 60 second countdown before the robot explodes and only one robot can win. The Robot that keeps surviving for the longest time in Hard mode goes to the next level. The Robot that got the most lives in Easy mode gets the most points in the final chapter. The Robot that gets the most points in the final chapter gets to make a wish. There is no game over screen in Easy mode and a Fast Forward button in Hard mode. As usual you can increase the replay value by running and jumping on bugs and the walls and the ceiling. The walls don't do you much harm, but do you know who the thing in the middle of the screen in the third picture is? He is not your friend (they should have named the game something else)! Hello there and welcome to Game Dev Eet! I'm here to announce the first Official Development Blog on our website. So you will be able to find the newest news on Game Dev Eet projects, improvements, fun developments and so on. These are the allmost exclusively my own opinions and ideas, so you can't find any info about the completley official stuff here. So please feel free to leave comments. Happy Gaming! Today, I wanted to share with you my impressions on World of Tanks, a popular MMO, strategy game developed by Wargaming.net. I am absolutely not paid to share this information, I purchased and own this game and I try to do some honest reviews on what we have. So this is my first review and it will be about the newest version of this game, since they got rid of the region lock and its restrictions. Without further hassle, the review: How to start playing: First thing first, if you like tanks, especially WWII, you have to buy this game and enjoy it! You can choose to play online, as it is a MMO, or offline. This choice is not that hard to make, but I will explain it here anyways, as my main point is the region locking and it might annoy you a bit. But for the first experience with the game, I can strongly recommend it

I just found out that this was not the only product that had a serious issue. Apparently not even the first product that Hydroflask made had a design flaw. In fact, they designed and built the first Hydroflask in 2011 and the issue with the plasticizer seepage became evident right away. The lid was incorrectly made out of a different type of plastic and the company fixed it for the next production run. You can read a detailed account of this in: [I really think that a simple 'no' would have been enough for this company to satisfy the customers. The company could have made a better effort to state the truth upfront. However, this is not the first time that something like this happens. Given the amount of plastic waste in the environment it is not surprising that this happen again and again. As seen in the picture below, plastic is everywhere and in the worst case even mixed with the drinking water. Update: It looks like there's even more plastic waste being released into the environment. The EPA itself reports that more than 72 million pounds of plastic waste \(or about 5.8 million LITERS!\) have entered the water system. Image source](#)
