I call the model and the class that I get from the database. I would like to change the size of the fonts of the labels but I do not know why the size does not change. Here is some of the model and the class:

```
public class
  RegistrosViewModel { public string documento { get; set; } public string documento_acer { get; set; }
    public string num_doc { get; set; } public string doc_consemento { get; set; } public string
      documento_cientes { get; set; } public string documento_faltas { get; set; } public string
        numero_doc_caso_recargo { get; set; } public string caja_caso_recargo { get; set; } public string
          foto_caso_recargo { get; set; } public string id_documento { get; set; } public string nombre_funcionario {
            get; set; } public string usuario_mibase { get; set; } public string nombre_funcionario_empleado { get; set;
              } public string usuario_tehost { get; set; } public string nombre_funcionario_resistente { get; set; } public
                string usuario_resistente { get; set; } public string nombre_funcionario_tesl { get; set; } public string
                  usuario_tesl { get; set; } public string nombre_funcionario_sos { get; set; } public string usuario_sos { get;
                    set; } public string nombre_funcionario_subesencion { get; set; } public string usuario_subesencion { get;
                      set; } public string nombre_funcionario_subed { get; set; } public string usuario 648931e174
```

How I can use this dictionary as a list? A: I think you need to use list comprehension with generator. Check it: >>> dic = {} >>> for k in ["a", "b"]: ... dic[k] = [] ... >>> for k,v in dic.iteritems(): ... print(k, v) ... a [] b []

Comparison of the emotional and behavioral symptoms of geriatric patients and community-dwelling healthy adults. The aim of this study was to investigate the validity of the Geriatric Emotional Distress Inventory (GEDI) for detecting emotional and behavioral symptoms in geriatric patients at home. Geriatric patients without dementia (N = 40) and community-dwelling adults of comparable age (N = 40) were evaluated with the GEDI, the Japanese version of the Mini-Mental State Examination (MMSE-J), and the Zung Self-Rating Depression Scale (SDS). The GEDI items were compared between the two groups. The age of the patient and control groups was significantly different. GEDI item responses were compared according to the verbal rating scale of MMSE-J. The mean (SD) total score of GEDI was significantly higher in the patient group than in the control group. The correlation between total GEDI scores and MMSE-J scores was significant for patient group ($r = 0.83$, p Intracoronary application of bone marrow derived mesenchymal stem cells is associated with reduced

restenosis after percutaneous transluminal coronary angioplasty. We present our results concerning the safety and feasibility of intracoronary application of autologous bone marrow derived mesenchymal stem cells (MSCs) in 24 patients with coronary artery disease, using an autologous MSC harvesting device and fibrin glue carrier. Twenty-four patients with coronary artery disease (16 male, 8 female, mean age 56.5 years, range 41-63 years) were enrolled in a prospective, single-center, open label, single-arm, pilot study. Forty-eight intracoronary injections of autolog
