***RGB mode:** The first thing you should learn is how to set up your image in RGB mode. RGB stands for red, green, and blue. The colors are available in a basic RGB color wheel form. ***Grayscale mode:** The next thing to learn is how to edit photos in grayscale. The color wheel is available in a grayscale version. * **8-bit gray:** Once you master the colors, the next thing to know is that a normal image is made of 8-bit gray values or values that range from 0 to 255. The result of such a setting is that there's no way of knowing whether the image has a value of 0 or 255. However, for color images, Photoshop is able to work around this limitation by converting each pixel into 256 colors based on the percentages of red, green, and blue. * **Images:** When you put in a layer mask, you can keep the colors in your original image as well as apply the mask on top of the image. * **Blending modes:** When you put one layer over another, you can blend them by using different blending modes. * **Document files:** Make sure you save your files with a.psd extension. * **Save:** As you'd expect, you'll see a Save button just beneath the File menu. However, I'll show you how to work with the Save As command in another chapter.

Breaking News Whitewater course safety eases much of race's danger BRIDGEPORT, WV—John Hooker may have to move to the NASCAR circuit. The young West Virginia native is the first to admit he's still not ready to race a real truck—a NASCAR machine that weighs more than 3,600 pounds. In other words, he may not be ready for prime time yet. In January, Hooker was critically injured in the Whitewater River. He had just finished racing his first pro event and took a few water skiers for a ride. "We crossed the river and me and my brother-in-law had planned for a day of fun on the river and so we took a break in this little place with water skiers and other boats and people," Hooker said. Hooker said they were riding along in a spot where there's a river pass that's set up. "My brother-in-law said he thought I would want to check out this river pass and we were almost to the end of the river where the river pass is and we jumped off the boat and it was a little shallow," Hooker said. "And, there was a rip, a current in there and I got caught by the current and I was getting carried downstream and they started jumping in the water but I didn't. "I was thinking, 'Help is on the way,' and all of a sudden I was at the bottom of the river and they pulled me out and there was this whole boat full of people yelling at me, and I could see my friends everywhere yelling. "I couldn't hear anything and I was mad because I thought I had brought it on myself. I should have known better than to go and check out a river pass that wasn't marked or anything." Hooker was rushed to a hospital, where doctors performed surgery to clean up the wound in his leg. Then they released him with some staples and a spinal brace. He was told he had four broken ribs, two collapsed lungs, and other problems, including multiple fractures. Six days later, Hooker was cleared to return to work. But, when he signed on the dotted line, he was worried about legal repercussions. "If
