The Walking Dead Season 3 Game for Mac torrent from Game, PC Games, Download Torrents, Games, Tdw, File host, Pages, Files, Direct download links, Full download links, Crack, Serial number, Serial numbers, Password, Serial numbers, Patch, Pass, IDM 6.18, ICA 6.18, TORRENT1. Field of the Invention The present invention relates to a method of transmitting a multimedia service in a mobile communication system, and more particularly to an apparatus and method for transmitting a multimedia service using a shared channel in a cdma2000 system. 2.

---

Description of the Related Art In a mobile communication system, in order to transmit a multimedia service using a shared channel such as a forward traffic channel (F-TCH) and a dedicated control channel (DCH), control information should be transmitted in a common channel. To this end, there has been proposed a method of transmitting control information in a multimedia service only when the channel of the common channel is in an idle state such as an idle state or a broadcast information state using a distributed channel descriptor (DCD). For example, in the cdma2000 1x-Evolution Data Only (1x-EV-DO) mobile communication system using a generic access profile, a method of transmitting control information such as a resource allocation bitmap in a shared channel (HSDCH) only when the channel state of the shared channel is in an idle state, using a CDV (Channel Descriptor Value) as a parameter has been proposed. That is, according to the CDV, when the channel state of the shared channel is in an idle state, a PDSCH, a PSCH, a DCH\_SHRCH, or a DCH\_FACH is transmitted in the shared channel, but when the channel state of the shared channel is in a broadcast state, a DCH\_PCH or DCH\_SHRCH is transmitted in the shared channel. However, in

the mobile communication system using the generic access profile, when a terminal intends to transmit control information on a shared channel such as in the CDV, when there is no state that is appropriate for the CDV such as when the channel state of the shared channel is in a broadcast state, the terminal should perform unnecessary back-off after
