Mar 12, 2018 â€œ Read our review of My brother introduced me to this blog and now i am his fan.. projekt video MONOPOLY IIIQ: Recommendation for Theory books I have just started to learn mathematical physics and have been very confused when looking for theory books. Are there any books that covers the necessary concepts in mathematical physics to answer questions in QFT, general relativity, and thermodynamics? A: The standard graduate level texts (in my opinion) to learn basic theoretical physics are: Gleason's "Measures on the Head of a Capybara" Chapter 11 of Brading and Holland's "The Geometry of Particle Physics" Hilbert's "Grundlagen der Geometrie". These books are aimed at graduate students, but also have chapters that you can read with only a layman's understanding. If you're new to theoretical physics I would recommend starting with the later two. For more advanced topics that I haven't been as familiar with I would suggest giving the following a read: Witten's "String Theory: Background in Field Theory" and Brian Greene's "The Elegant Universe" DeWitt's "Relativity, Groups, and Topology" and DeWitt's "The Conceptual revolution in quantum gravity" Rovelli's "Quantum Gravity" Kiefer's "Quantum Gravity" and "Quantum Cosmology" And, finally: Visser's "Lorentzian Wormholes" and Visser's "Lorentzian Wormholes" After you've read these I suggest moving on to more familiar topics like "Complex Variables" and "Differential Equations". As time goes
